Points in cluster 2 with centroid C_2 are P1, P3, P6.

Need to check whether centroid of cluster changes or not

New centroid of cluster 1: $C_{1\,new_x} = \frac{1}{3}(0.22 + 0.26 + 0.08) = 0.186$

$C_{1\,new_y} = \frac{1}{3}(0.38 + 0.19 + 0.41) = 0.326$

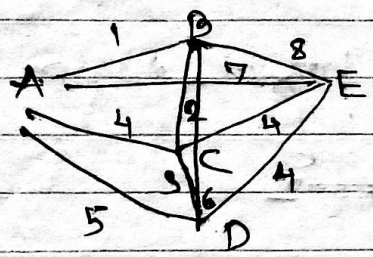
A MST of graph is subgraph that.

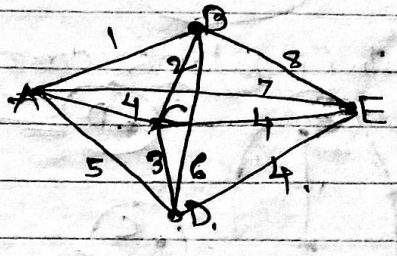
(a) has no cycles i.e. is a tree.

(b) contains all the nodes of graph

(c) has minimum total edge weight of all possible trees.

Step 1 → First construct graph for the points given.





Step 2 → Arrange edges of graphs in increasing order of weight

Step 3 → Apply Kruskal's algorithm to build MST.

(a) Sort all edges in increasing order of weight.

(b) Pick smallest edge. Check if it forms cycle with S.T. formed so far. If cycle is not formed, include edge. Else discard it.

(c) Repeat #b until there are V-1 edges in tree. where V is number of vertices in graph.
